

PRESENTATION

How has scientific research contributed to the implementation of the European Landscape Convention? And what are the main topics for the future of European landscapes?

The 10th anniversary of the European Landscape Convention is the occasion to discuss in depth all the scientific and cultural aspects related to landscape in order to develop an integrated and interdisciplinary approach to landscape research in a rapidly changing world.

Aim of the conference is to discuss cutting-edge research results at the crossroads of sciences and humanities, design and empiricism.

The conference is a joint initiative of UNISCAPE and LANDSCAPE EUROPE.

UNISCAPE – European Network of Universities for the Implementation of the European Landscape Convention was founded in Florence in 2008. Aim of UNISCAPE is to support and reinforce interdisciplinary cooperation within and among European universities regarding landscape issues, especially with regard to research and education.

LANDSCAPE EUROPE – International Network of Expertise on Landscapes was established in 2001. It is an interdisciplinary network of national research institutes with expertise in landscape assessment, planning and management at the interface of policy implementation, education and state-of-the-art science in support of sustainable landscapes.
